SUMMARY

Principal Engineer in the AI Native Division at eBdesk Teknologi (since October 2023), with a fullstack background and prior experience as an AI Native Team Leader. Expert in frontend engineering (ReactJS, TypeScript, NextJS, TailwindCSS, Bootstrap, Sass, Styled Components) with proven experience owning core, company-wide features on Fusion Builder, the company's dashboard-building platform – including a configuration-based Form/Data Management builder and a custom React DevTools-style widget editor. Sets technical direction and engineering standards for AI-assisted ("vibe coding") development, including the fullstack boilerplate used by the team, while staying hands-on across frontend and backend (Python, ExpressJS, Golang) and data visualization/mapping tools (Apache ECharts, Mapbox). Mentors developers and reviews architecture and code quality; previously led a 5-person development team with daily task tracking, work mapping, and delivery oversight for multiple client dashboards.

WORK EXPERIENCE

eBdesk Teknologi Bintaro, Tangerang Selatan, Banten, ID

AI Native & Principal Engineer *Oct 2026 – Present*

- Define the technical architecture and engineering standards for the AI Native division, evolving the fullstack (frontend + backend) boilerplate and the AI-assisted "vibe coding" workflow used across new projects.
- Stay hands-on as a senior individual contributor, building and unblocking complex frontend and backend features and setting patterns the rest of the team reuses.
- Mentor developers and run code and architecture reviews to keep quality high in AI-assisted development.
- Research and evaluate AI tooling (agents, MCP, skills) and turn the findings into reusable practices and guidelines for the division.

AI Native & Team Leader *May 2026 – Sep 2026*

- Lead a team of 10 developers in the newly formed AI Native division, transitioning the team's workflow from traditional coding to AI-assisted "vibe coding" across both frontend and backend.
- Plan, collect, and map daily tasks and workload distribution across the team to ensure consistent delivery.
- Built a fullstack (frontend + backend) boilerplate to standardize and accelerate the team's vibe-coding workflow for new projects.
- Delivered Room Booking, a web and mobile application built using the vibe-coding boilerplate, covering frontend development and basic backend work (database integration and API endpoint creation).

Fullstack Developer & Team Leader *Oct 2025 – Apr 2026*

- Transitioned from frontend to fullstack developer as part of a company-wide initiative, expanding scope beyond frontend engineering while continuing to support Fusion Builder's core features.
- Selected and trained for 3 months (Jan–Mar 2026) before being confirmed as team leader for a 5-person fullstack development team.
- Managed daily task tracking and quality checks for team members, who focused on maintaining, auditing, and refining client dashboards built on the Fusion Builder platform.
- Oversaw delivery and maintenance of an estimated 7–10 client dashboard projects during this period.

Frontend Developer *Oct 2023 – Sep 2025*

- Trusted as a core frontend developer on Fusion Builder, the company's central dashboard-building application, owning two major platform-wide features.
- Built a configuration-based Form/Data Management builder, allowing CRUD interfaces (table or card list views) and form configurations to be generated without manual coding - significantly speeding up dashboard development and adopted across many client dashboards.
- Developed a custom in-app code editor (DevTools-style) for Fusion Builder using CodeMirror for the editor and Babel Standalone for widget rendering, enabling users to build and integrate their own custom widgets and services within the React ecosystem without developer involvement.

ORGANIZATIONAL EXPERIENCE

Informatics Management Student Association Kuningan, ID

Vice Chairman *Sep 2020 – Aug 2021*

- Improve member performance by 30% while holding activities organized by HIMA MI.
- Increase member creativity by 40% by holding competition activities between study programs.
- Organizing events or activities directly with a 70% success rate by prioritizing mandatory tasks and organizing effective scheduling.
- Increase the number of social activities organized by the association by 50% to have a positive impact on the campus community.
- Create a mentoring program for new students with a 70% success rate to facilitate their integration in the campus environment.

EDUCATION

Universitas Kuningan Kuningan, ID

Associate Degree (D-3) – Informatics Management *Sep 2019 – Oct 2022*

GPA 3.67

- Joined the Basic and Advanced Web Programming course by creating a final project, namely a website-based food order system using HTML, CSS, Javascript, PHP and MySQL tools.
- Participated in Graphic Design course by creating a portfolio design project using CorelDraw tools.
- Participated in internship activities at SMPN 1 Hantara by creating a website-based library information system and increasing website responsiveness by 50% using HTML, CSS, Javascript, PHP and MySQL tools.
- Made a final project entitled website-based Point Of Sale information system at the village flower shop, and increased website performance by 70% using HTML, CSS, Javascript, PHP and MySQL tools.

CERTIFICATION & BOOTCAMP

EDUWORK Jakarta, ID

MERN Stack Web Developer *Feb 2023 – Jun 2023*

- Learned how to create the basic structure of web pages using HTML, style elements using CSS, and utilize the Bootstrap framework to build responsive web interfaces and implement them in the task of creating web pages according to the example images given in a period of about 2 days.
- Learned JavaScript as the primary programming language, including OOP concepts to create structured and modular code. Implemented it in the task of creating a simple game using JavaScript in about 2 days, and for OOP, implemented it in the task of creating a mini library in about 4 days.
- Learned how to manage tasks that run simultaneously using asynchronous concepts such as Promises, async/await, and callbacks, and implemented them in the task of creating a news portal website with API data in approximately 5 days.
- Delved into web application development, including creating components, managing state, and implementing routing within a timeframe of 2 weeks using ReactJS.
- Learned server-side development for data management within a timeframe of 6 days, using NodeJS and the ExpressJS framework, as well as integrating with both NoSQL (MongoDB) and relational (MySQL) databases.
- Developed responsive and interactive web applications by mastering HTML, CSS, JavaScript, ReactJS, and backend technologies like NodeJS and ExpressJS, understanding of code management within a timeframe of 6 days, using GIT and the usage of databases such as MongoDB and MySQL also contribute to my knowledge.

SKILLS, INTEREST & LANGUAGE

Technical Skills (Expert) : ReactJS | TypeScript | NextJS | TailwindCSS | Bootstrap | Sass | Styled Components | HTML | CSS | JavaScript | ExpressJS

Technical Skills (Intermediate) : Python | Golang | SQL | NoSQL | Apache ECharts | Mapbox | Highcharts | ApexCharts | D3.js | Ogma.js (SNA) | Three.js | Markdown

Tools : GIT | GitHub | GitLab | CI/CD | Visual Studio Code | NPM | Claude | Docker | PostgreSQL | MongoDB

Soft Skills : Technical | Architecture & Standards | Mentoring | Team Leadership | People Management | Problem Solving | Communication | Team Collaboration | Creativity | Fast Learning | Time Management

Interests : Frontend Development | Fullstack Developer | AI-Assisted Development (Vibe Coding) | Software Engineering | Web & Graphic Design

Language : Indonesian (Native) | Sundanese (Native) | English (Beginner)

PROJECTS

Properties App – Multi-Module Property Management Platform Feb 2024 - Present

Role: Frontend Developer (external project, alongside supervisor)

- Developed the frontend (UI/UX), service integration, and application logic for a property platform covering 4 sub-applications: Marketing, Management, Finance, and Engineering.
- Tools: React, TypeScript, Bootstrap, Sass, Styled Components, Axios, Apache ECharts, Mapbox.
- Ongoing maintenance and bug fixes as needed.

Link: https://cpp.propertis.pro/home

Architect Portfolio Landing Page Apr 2026 - Present

Role: Frontend Developer (external project, alongside supervisor)

- Built a landing page for an architect client using NextJS.

Link: https://kafiarchitect.com/blog

Microstock Automation – AI-Powered Content Pipeline Personal Project

- Built a personal Python automation pipeline to streamline microstock content creation: identifies trending niches expected to rise over the next 3 months, generates images via the Leonardo AI API, and generates image metadata via the Anthropic API — reducing the workflow to just uploading a photo and CSV file.

Link: GitHub (coming soon)

Food e-commerce Apr 2023 – Jun 2023

- Details: An online food ordering system that lets users complete transactions without visiting the store in person.
- Tools: MongoDB, ExpressJS, ReactJS, NodeJS, Mongoose, AntDesign, Redux, Stripe.
